

Koray Nar

Public-Source Research Analyst | Evidence-First QA | AI-Assisted Research Workflows

koraynar@gmail.com · Istanbul, Türkiye (remote) · researchgate.net/profile/Koray-Nar · boun.academia.edu/KorayNar ·
Research sample: koraynar.github.io/research-samples

Profile

Independent analyst working on public-source research and digital analysis. I turn scattered evidence into source-linked, decision-ready reports: chronologies, actor and interest maps, trigger indicators, scenarios, and a source appendix. Focus areas: U.S. foreign relations, U.S.–China technology and export-control policy, Asia-Pacific security. Project-based background rather than a newsroom or think-tank career; I do not claim insider access or exclusive sources.

How I work

I run an AI-assisted research workflow. Several AI models work on the same task in parallel, each in a fixed role: primary-source collection, cross-checking, counter-argument, and citation/logic review. They challenge each other's findings; I supervise, resolve disagreements, and sign off. Every claim in my reports traces to a source and carries a confidence label (confirmed / reported / inferred). I am accountable for the result.

What I deliver

- Structured research notes: chronology, actor positions, trigger indicators, scenarios
- Ongoing issue monitoring with dated updates and change logs
- Source appendices linking to primary documents (official statements, filings, legislation, transcripts)
- Concise briefs, full reports, and presentation decks; Python and spreadsheet analysis where useful

Experience

Multi-model AI research system — design and operation

Independent

- Designed and run a bridged workflow in which AI models from three platforms plus a locally hosted model work the same task in fixed roles: source collection, verification, counter-argument, and citation/logic review.
- Sessions exchange findings, dispute weak claims, and converge on a verdict; I supervise the process, break ties, and sign off on the output.

AI automation for science and research projects

Independent / contract

- Built AI-assisted pipelines that collect, verify, and structure information for research and analysis work.
- Delivered structured outputs (briefs, datasets, decks) with claim-to-source traceability and human review.

Security research under public bug-bounty programs

Independent · 2026

- Built and published an AI-assisted source-review kit (recon → deep review → triage) for authorized, in-scope code review: github.com/koraynar/bounty-review-kit.
- First coordinated-disclosure submission filed August 2026 with a reproducible test-based proof of concept.

Author, Apex Failure-Map License

Independent product · 2026

- Offline decision kit for small automation teams: failure-map checklists, kill-gate templates, decision memo, worked example, and SHA-256 verification.

Evidence-first QA and landing-page reviews (Signal Scan)

Independent · 2026 – present

- Fixed-price, screenshot-backed reviews of storefronts and landing pages; findings ranked by impact with a measurement step.
- Public method samples published; no client results or performance claims.

Education

MSc, Cognitive Science — Boğaziçi University, Istanbul

Graduate research in cognitive psychology, cognitive neuroscience, perception, and consciousness.

MA, English Language Teaching (ELT) — Anadolu University, Faculty of Education, Eskişehir

Skills

Primary-source collection · multi-source verification · claim-to-source traceability · confidence labeling · timelines and actor/interest mapping · scenario and trigger analysis · Python · spreadsheets · report and deck writing · citation, logic, and unsupported-claim review

Languages · Availability

Turkish (native) · English (advanced; MA in English Language Teaching) · Immediate. Part-time, project-based; open to a paid trial assignment.
